

**Your advantages with the
new  zeta[®] safety clamping system**

Your advantages at a glance

- ✓ Increased torque over all other collet clamping systems, because the torque is transferred thru the new ZETA profile by means of the screw-on torque nut or adapter.
- ✓ Proper torque settings can be archived by using a torque wrench in combination with our zeta screw-on torque nut or adapter.
This takes out the guess work.
- ✓ No more slipping of cutting tools inside the collet.
- ✓ Standard wrenches with 1/2", 3/8", or 1/4" can be used as well for clamping the collet nut with our adapters allowing for easy radial and axial clamping.
- ✓ By using our torque nut adapters in an axial position you can be assured of proper clamping of your collets.
- ✓ The unique patenteted zeta profile eliminates the possibility of slipping away from the collet nuts during clamping operations witch reduces accidental tool breakage an more importantly machinist injuries.
- ✓ Safe and simple clamping of collet nuts of type ER 8 to ER 50 (DIN6499) and OZ25/RDO35 (DIN6388).
- ✓ Zeta collet nuts are available with internal or external thread as well as ER Mini. Soon available in ER an OZ/RDO standard versions, too.
- ✓ The diameter of our clamping tools are always the same size or smaller in diameter then the collet nuts, which allow for ease of acess between spindles that are very close together or for tight areas in the machine.
- ✓ Zeta sealing nuts are compatible with regofix sealing discs.

Zeta collet nuts allow for flush seating of the collet without any space. That could be contaminated with chips and therefor interfering with the cooling fluid coming thru the collet.
- ✓ The new zeta safety collet clamping system is the clear choice for safe and proper mounting of your tooling.
